I CHAPTER
General provisions

1. **The Freight Carriage Tariff Book 01-LTG Cargo of LTG Cargo AB** establishes the procedure for calculating the base freight carriage rates (the "carriage rates") of LTG Cargo AB ("LTG Cargo") for cargo and empty rolling stock carried by rail between the Republic of Lithuania and foreign countries and between domestic railway stations in the Republic of Lithuania. This book does not apply to transit shipments to and from the Kaliningrad Oblast of the Russian Federation.
2. The following terms and abbreviations shall be used in the Freight Carriage Tariff Book 01-LTG Cargo of LTG Cargo AB:
   - **ADV/6** – Rules for Rail Freight Transport, approved by the Minister of Transport and Communications of the Republic of Lithuania.
   - **Base rates** – rates specified in the freight carriage rate schedules and subject to the calculation procedures and coefficients set out in Chapters III–V of the Freight Carriage Tariff Book 01-LTG Cargo of LTG Cargo AB.
   - **CN** shall mean the Common Cargo Nomenclature.
   - **CIM** shall mean the Uniform Rules concerning the Contract of International Carriage of Goods by Rail (Appendix B to COTIF).
   - **Intermodal Transport Unit (ITU)** shall mean a container, detachable vehicle body or semi-trailer.
   - **RID** means the Rules for the International Carriage of Dangerous Goods by Rail.
   - **SMGS** shall mean the Convention on International Customs Transit Procedures for the Carriage of Goods by Rail.
   - **UIC** shall mean the International Union of Railways.
   - **Wagons owned by the carrier** – unleased wagons owned by LTG Cargo and other railway administrations and assigned to a single freight carriage trip.
   - **Wagons and containers not owned by the carrier** – wagons and containers owned by natural or legal persons (excluding railway administrations) and wagons and containers leased from natural or legal persons.
3. Carriage rates are calculated for the distance from the centre line of the originating station (or the border crossing point for inbound carriage under international consignment documents) to the centre line of the destination station (or the border crossing point for outbound carriage under international consignment documents).
4. Freight rates are calculated in accordance with the **AB "LTG Cargo" Freight Carriage Tariff Book 01-LTG Cargo**, which was in effect on the date indicated by the calendar stamp of the originating station on the waybill.
5. Rates shall be specified in euros (EUR) excluding value added tax (VAT).

II CHAPTER
Provisions for the Calculation of Carriage Rates

I Section. Basis for the Calculation of Carriage Rates

6. Carriage rates shall be calculated on the basis of:
   - 6.1. Table of Rates (Chapter VII);
   - 6.2. Rules for the Carriage of Dangerous Goods (Annex 2 to SMGS) and the Regulations concerning the International Carriage of Dangerous Goods by Rail (RID);
   - 6.3. Procedure for Calculating Rates (Chapters III to V);
   - 6.4. Distances between domestic stations of Lithuanian railways (Section XVIII);
   - 6.5. Distances between domestic and border railway stations on the Lithuanian railway network (Section XIX);
   - 6.6. Distances on Lithuanian railways between border crossing points (Section XX).

II Section. Weight of Cargo

7. The minimum weight of the goods in the wagon for which the carriage rate is calculated shall be 45 tonnes, unless otherwise specified.
8. The weight of the cargo shall consist of:
   8.1. the net weight of the cargo, the weight of the packaging (containers) of the cargo and the weight of the equipment required for securing the cargo;
   8.2. the weight of additional removable and non-removable equipment not included in the weight of the wagon container.
9. The weight of the cargo in the wagon shall be rounded off as follows: a weight of 500 kilograms or more shall be rounded off to the nearest tonne; a weight of less than 500 kilograms shall not be counted.

III CHAPTER
Carriage of Loaded and Empty Rolling Stock (Except Container)

III Section. Determination of the Carriage Rate per General-Purpose Wagon

10. The carriage rate for a universal wagon shall be calculated in accordance with Rate Schedule 1 of Chapter VII.
11. The carriage rate of cargo in a covered technically modified wagon, the number of which begins with 918..., and in wagons with numbers from 9082000 to 9089998 shall be calculated according to Rate Schedule 1 of Chapter VII.

IV Section. Determination of the Carriage Rate per Specialised Wagon

12. The rate for the carriage of cargo in a specialised wagon shall be calculated according to Rate Schedule 2 of Chapter VII.
13. The rate for carriage of goods in a refrigerator wagon shall be calculated according to Rate Schedule 2 of Chapter VII, applying a coefficient of 2.0.
14. For cargo transported in tank wagons under CN headings 2705-2709, 2711-2715, 2710, 2801, 2804, 2811, 2814, 2901–2904 and 3911, the carriage rate is calculated using Rate Schedule 3 of Chapter VII.

V Section. Determination of the Rate for Freight Transported up to 150 km

15. In the case of carriage of goods on local routes (including carriage to/from the stations serving Klaipėda Port: Klaipėda, Klaipėda (exp.), Draugystė, Draugystė (port, exp.), Rimkai) for a distance of not more than 150 km in a general-purpose wagon or specialised wagon (except for refrigerator wagons and tank wagons), the rate shall be calculated in accordance with the procedure set out in Section III or IV, applying the coefficients set out in Table 1 of this Section. In the event of a modification of the contract of carriage (re-routing) at the request of the consignor/consignee or its authorised representative, the coefficients set out in Table 1 of this Section shall not apply to the onward route.

Table 1

Distance, km	Coefficient
up to 50	0.7
51-100	0.8
101-150	0.9

VI Section. Determination of the Rate for the Carriage of Freight in a Combination of Wagons

16. For long in-gauge cargo loaded onto two or more wagons and carried in a coupled group of wagons under a single consignment note, and for an empty wagon attached as a buffer wagon or an empty wagon with a checking frame carried in such a group, the carriage rate is calculated separately for each wagon in accordance with Section III or IV. If the consignment documents do not specify the weight of the cargo in each wagon, the total cargo weight is divided equally among the wagons.
17. When long out-of-gauge cargo loaded onto two or more wagons is carried in a coupled group of wagons under a single consignment note, the rate is calculated separately for each wagon in accordance with Section VII, applying the coefficient corresponding to the highest degree of out-of-gauge dimensions of the cargo carried in the group. If the weight of the cargo is not specified separately for each railcar, the total weight of the cargo is divided equally among the railcars.
18. If long cargo is carried on two permanently coupled flat wagons that form an indivisible unit and have a single wagon number, the rate is calculated as for one wagon in accordance with Section III or IV.

VII Section. Determination of the Rate for the Carriage of Out-of-Gauge Cargo in General-Purpose and Specialised Wagons and of In-Gauge and Out-of-Gauge Cargo in Transporter Wagons

19. The carriage rate for out-of-gauge cargo (except cargo exceeding the maximum out-of-gauge limits and cargo with degree 6 lower or lateral out-of-gauge dimensions), as well as for in-gauge cargo carried in transporter wagons, is calculated using Rate Schedule 2 of Chapter VII, applying a coefficient of 2.0.
    19.1. For cargo exceeding the maximum out-of-gauge limits and cargo with degree 6 lower or lateral out-of-gauge dimensions, the rate is calculated using Rate Schedule 2 of Chapter VII, applying a coefficient of 4.0.

VIII Section. Determination of the Rate for the Carriage of Cargo by a Single Locomotive

20. The rate for the carriage of cargo and rolling stock treated as cargo by a single locomotive is calculated in accordance with the procedure set out in Chapters III–VII, with an additional charge of EUR 20.00 per locomotive kilometre.

IX Section. Determination of the Carriage Rate for Cargo Securing Devices

21. The rate for the carriage of goods with cargo securing devices owned by the consignor shall be calculated for the total weight of the cargo and securing devices.
22. The freight rate for cargo securing devices that are carried without cargo shall be calculated for the actual weight of the cargo securing devices in accordance with the procedure laid down in Clause 10 or 12. The minimum weight of securing devices in a wagon for which the carriage rate is calculated shall be 25 tonnes.
23. For the carriage of empty private wagons equipped with securing devices, the weight of which is not included in the tare weight of the wagon, the rate specified in Clause 24 shall be calculated.

X Section. Setting the Rate for the Carriage of Empty Rail Wagons and Other Special Rolling Stock, Whether Owned by the Carrier or Not

24. The carriage rate for empty wagons owned by the carrier (with duly completed SMGS, CIM or KR-99 consignment documents), empty wagons not owned by the carrier and other special rolling stock is calculated as follows, depending on the type of rolling stock:
    24.1. in accordance with Rate Schedule 6 of Chapter VII, the carriage of universal and special purpose rolling stock (except for the cases provided for in Clauses 24.2 and 24.3);
    24.2. in accordance with Rate Schedule 7 of Chapter VII – for the carriage of tank wagons;
    24.3. in accordance with Rate Schedule 8 of Chapter VII – for the carriage of a diesel-generator wagon not owned by the carrier and servicing empty refrigerated wagons, refrigerated wagons, transporter wagons and other special rolling stock (passenger coaches, locomotives, self-propelled rolling stock, cranes, track maintenance machines, etc.).
25. The rate for supplying wagons owned by the carrier from the station where they are based for loading and returning them to that station after unloading is calculated in accordance with Clause 24, as for carriage over the distance for which cargo was carried in the wagon.

26. Where a container is carried in a wagon owned by the carrier, no fee is charged for supplying the wagon from the station where it is based for loading or for returning it to that station after unloading.
27. The rate for returning empty buffer wagons or empty wagons with checking frames owned by railway administrations of other countries after carriage is calculated in accordance with Clause 24, as for carriage over the distance of the original movement.

XI Section. Determination of the Rate for the Carriage of Persons Accompanying Cargo, an Empty Wagon or a Locomotive

28. No fee is charged for the carriage of persons accompanying cargo or personnel servicing a diesel-generator wagon. The fee applies only to the railcar (freight or passenger) or locomotive in which these individuals are travelling.

XII Section. Determination of the Rate for the Carriage of Transhipped Cargo

29. When cargo is transhipped from one car to two or more cars of a different gauge, the freight rate is calculated in accordance with the procedures set forth in Chapter III, based on the cargo weight specified in the original waybill.
30. If cargo loaded onto two or more wagons and consigned to one consignee at one destination station is transhipped at a transhipment station from two or more wagons of one track gauge into one or more wagons of another track gauge, the carriage rate for the transhipped cargo is calculated in accordance with Chapter III, based on the cargo weight in the wagon into which it is transhipped.
31. If the ownership category of the wagons changes during transhipment, the rate applicable to the ownership category (owned or not owned by the carrier) of the wagon in which the cargo is carried over the longer distance applies.

XIII Section. Calculation of Rates for Mixed Cargo

32. For mixed cargo (where several types of cargo are carried in one consignment under a single consignment note), the carriage rate is calculated for the total cargo weight in the wagon at the rate applicable to the cargo accounting for the greatest weight, except where the loaded cargo includes dangerous or out-of-gauge cargo – in that case, the rate for dangerous or out-of-gauge cargo, as applicable, applies to the entire weight.

IV CHAPTER
Container Carriage

XIV Section. Determination of the Rate for the Carriage of Cargo in a Container

33. The rate for freight transport in a general-purpose container not belonging to the rail freight carrier is determined per container, based on the container's length, in accordance with the rate schedules set forth in Table 2 of this section:

Table 2

Container type	Rate schedule numbers in Chapter VII
up to and including 20 feet	4
over 20 feet	5

34. The rate for freight transport in a refrigerated, tank, or other specialized container not owned by the carrier shall be calculated in accordance with the procedure set forth in Clause 33, applying a coefficient of 1.3.
35. The rate for a diesel-generator car not owned by the carrier, used to service loaded or empty refrigerated containers, shall be calculated in accordance with the procedure set forth in Clause 24.
36. For cargo carried in transport packaging that does not meet the requirements laid down in regulatory documents for containers, the rate shall be calculated as for cargo carried in a wagon.

XV Section. Determination of the Rate for the Carriage of an Empty Container Not Belonging to the Carrier

37. The rate for the carriage of a container not belonging to the carrier shall be calculated based on the rate for the carriage of a loaded container of the corresponding type, applying a coefficient of 0.5.

V CHAPTER
Carriage of Dangerous Goods

38. The class of dangerous goods shall be determined in accordance with the Rules for the Carriage of Dangerous Goods (Annex 2 to SMGS) and the Regulations concerning the International Carriage of Dangerous Goods by Rail (RID).
39. In the case of dangerous goods of hazard class 1 (explosive substances and articles) and 6.2 (infectious substances), carriage rates shall be determined in accordance with the procedure laid down in Chapters III to IV, applying a coefficient of 2.0.
40. The carriage rates for Class 7 (radioactive material) dangerous goods are determined in accordance with Chapters III–IV, applying a coefficient of 5.0.
41. For dangerous goods other than those referred to in Clauses 39 and 40, the rates shall be determined in accordance with the procedure laid down in Chapters III to IV, without applying the coefficients specified in Clauses 39 and 40.

VI CHAPTER
Carriage of Cargo and Containers in Wagons Owned by the Carrier

42. When transporting cargo and containers in railcars owned by the carrier (LTG Cargo and railways of other countries), a one-time fee for the use of such a railcar for a single freight transport operation involving cargo or containers is charged, as specified in Section III of the “LTG Cargo” Price List for Additional Services (PP-LTG Cargo).

VIII CHAPTER
Tables of Distances and List of Stations

XVI Section. Principles for Calculating Distances

43. Section XVII contains an alphabetical list of commercial railway stations in Lithuania.
44. The list of commercial stations includes the following sections:

    1 - station sequence number;

    2 - station name;

    3 - six-digit number (code) of the station on the consignment document.

When transporting goods in accordance with the Convention on International Customs Transit Procedures for the Carriage of Goods by Rail (SMGS) or the Rules for the Carriage of Goods by Rail (ADV/6) approved by the Minister of Transport and Communications of the Republic of Lithuania, the commercial and sorting station codes given in Section XVII shall be used. For the carriage of goods under the Uniform Rules concerning the Contract of International Carriage of Goods by Rail (CIM), the UIC commercial station codes given in Section XVII shall be used.

45. Tariff distances between two commercial stations shall be calculated from one commercial station to another commercial station. Tariff distances between commercial and border stations shall be calculated from the commercial station to the national border.
46. For the purpose of determining the tariff distance between two commercial stations, the station in the left-hand column shall be taken as the start station and the station in the top row as the end station (Section XVIII).
47. For the purpose of determining the tariff distance between a commercial station and a border station, the commercial station in the left-hand column shall be taken as the start (end) station, while the border station shall be taken as the top row (Section XIX).
48. When determining the tariff distance between border stations, the commercial station listed in the left-hand column is considered the starting border station, and the station in the top row is considered the terminal station (Section XX).

XVII Section. List of Stations

COMMERCIAL AND MARSHALLING STATIONS

No.	Station name	Station code
1	2	3
1	Akmenė	126707
2	Alytus	123605
